

What?

Science, mopeds
(manned/unmanned)

Where?

Other earth like planets
(suitable for rovers/drones)

Problem:
Mapping in the
absence of
external
technology

Who?

Humans in whole,
scientists and
engineers making the
plans

When?

Before exploration
Before settlement

Why?

- * Lack of Global positioning system (GPS)
- * Lack of reference points
- * No maps / need for more detailed 2D/3D maps
- * Safety for later visitation of humans/other things

How?

Higher risk of failure for uncertainty
